Education

University of Guelph

Expected April 2027

Bachelor of Computing (Computer Science)

GPA: 3.7

Minor in Mathematics

Relevant Coursework: Software Engineering, Intelligent Systems, Statistics, Data Structures, Algorithms, Linear Algebra

Technical Skills

Programming & Data: Python, Java, JavaScript, TypeScript, C++, SQL, R, Bash

Frameworks & Libraries: React, Next.js, Node.js, Express.js, Flask, FastAPI, Pandas, NumPy, Matplotlib, SciPy

Databases & APIs: PostgreSQL, MySQL, SQLite, REST APIs, Data Modeling, ETL Pipelines

Tools & Platforms: Git, GitHub, Docker, AWS, Google Cloud, CI/CD, Figma

Experience

Data & Growth Analytics (Contract · Part-time)

Jan 2026 – Mar 2026

Axon Health Inc. (Venture for Canada)

- Build and maintain structured datasets using Python and SQL to support customer and market analysis.
- Develop segmentation logic across 5–7 customer cohorts to inform onboarding and growth initiatives.
- Collaborate with product and leadership to translate qualitative and quantitative data into actionable insights.

Growth Strategy Analyst (Contract · Part-time)

Jan 2026 – Feb 2026

Roots Funding (Riipen)

- Conducted market, customer, and operational analysis to support the development of a data-driven growth strategy.
- Produced a final Growth Strategy Report synthesizing insights into actionable recommendations for stakeholders.

Teaching Assistant — Discrete Structures & User Interface Design (Part-time)

Sep 2025 – Apr 2026

University of Guelph

- Led weekly labs and academic support for a course with 250+ students, reinforcing algorithmic and logical thinking.
- Held office hours, graded assignments, and supported course delivery for approximately 10 hours per week.

Research Assistant (Full-time)

May 2025 – Aug 2025

University of Guelph

- Conducted qualitative HCI research on smartwatch-based stress monitoring and user appropriation.
- Analyzed data from 18 semi-structured interviews, 238 app store reviews, and public social media posts.

Projects

StepByStep — Full-Stack AI Math Tutor (Group Project)

GitHub

- Built a full-stack tutoring system in a 7-person team with adaptive, step-by-step math feedback.
- Implemented a difficulty estimation algorithm using linear regression on EQAO question word counts.

Skin-Sync — AI Skincare Assistant

Live Site

- Developed a production-ready full-stack web app delivering personalized, AI-driven skincare recommendations.
- Built RESTful backend services with Flask and integrated AI workflows for routine generation.

Pipeline to Success — Education Platform (Club Project)

Live Site

- Contributed to frontend development for a platform used by 100+ Guelph students preparing for the MCAT.
- Improved UI layout, responsiveness, and usability in collaboration with engineers and designers.

Publications

Social and Playful Appropriation of a Smartwatch Stress Monitor

CHI 2026 (Under Submission) — Co-author; qualitative analysis and manuscript preparation.
